EquityLens NG

DESIGN SYSTEM · VERSION 0.2.0 · 28 OCTOBER 2026

Lens

The visual language of EquityLensNG

Calm surfaces, honest data, and colour reserved for meaning. This guide explains the principles, tokens, components and rules behind every EquityLensNG screen.

MARKET TODAY · FRI 24 OCT

The market rose for a third day

38 stocks rose and 21 fell, with ₦12.4B traded across 9,814 deals.

What Lens is

Lens is the design system for **EquityLensNG**, a web app that turns Nigerian Exchange (NGX) market data into charts, signals and plain-language explanations. It is the shared set of decisions that makes every screen look, read and behave the same way, in dark mode and in light.

Three layers

1 **Tokens**

Named values for colour, type, spacing, radius, shadow and motion, kept in one file, `design/tokens.css`. The app never uses a raw colour code; a lint rule blocks it.

2 **Components**

32 reusable building blocks, from buttons and price changes to the chart and the AI insight card. Each is built only from tokens.

3 **Patterns and rules**

How the pieces behave together: loading, data freshness, filtering, errors, keyboard use, accessibility and the voice of the copy.

Who it is designed for

Ada, the curious first-timer. Owns two or three stocks, mostly on mobile. Asks “Is my stock up? Why?” and needs plain language.

Tunde, the active trader. Checks the market daily on desktop and mobile. Wants fast charts, indicators, signals and shareable links.

Ngozi, the analyst. Researches sectors and peers for clients and needs comparisons and exportable data.

All three use the same screens. Depth is revealed on demand rather than split into “simple” and “pro” modes.

Decisions at a glance

Version	0.2.0, 28 Oct 2026, the “Depth + Editorial headline” direction
Palette	Lens Green: #00C896 dark, #00805F light
Typefaces	IBM Plex Sans, IBM Plex Mono, Fraunces
Themes	Dark by default. Light when chosen, or when the device prefers it
Standard	WCAG 2.2 level AA
Built with	React, Radix primitives, Tailwind CSS v4, Lightweight Charts, ECharts, Lucide icons

Seven principles

Every rule later in this guide traces back to one of these. When a case is not covered, decide it by asking which principle applies.

01

Clarity before density

Lead with the one number that matters (price, change, freshness), then reveal depth on demand. Ada and Tunde use the same screens: progressive disclosure, not separate modes.

₦245.00 ▲ +5.50 (+2.31%)

02

Honest data

Always show *when* the data is from, in West Africa Time (WAT). Never imply real time. Show empty, partial and stale states plainly.

● Data as of 14:35 WAT · 26 Oct

03

Direction is never colour alone

Every gain or loss pairs colour with a sign (+ or –) **and** an arrow (▲ or ▼). About 1 in 12 men has a red–green colour vision deficiency.

▲ +2.31% ▼ −0.45% ■ 0.00%

04

AI is labelled

Anything model-generated sits in the violet AI treatment, with a disclaimer, the model name and a timestamp.

✦ AI gemini-2.5-flash · 09:12 WAT

05

Calm by default, with depth

Layered navy surfaces are lifted by soft elevation rather than outlines. Colour is reserved for meaning: brand action, gain and loss, AI, alerts. The one glow is the active navigation item in dark mode. No gradients or glows on data.

06

Mobile is first-class

Design at 360 px wide first, then enhance for larger screens. Touch targets are at least 44 px.

07

Tell the day like an editor

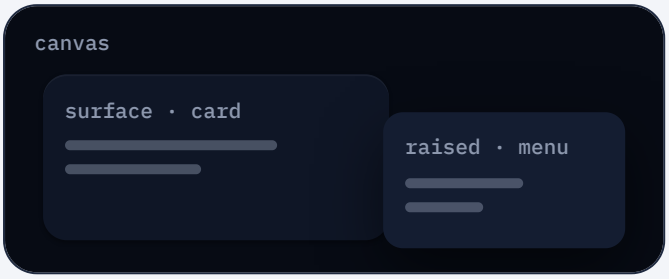

A page leads with a plain-language headline in the display serif and a one-sentence standfirst built from the numbers by a template (never by AI), then the detail.

The market rose for a third day

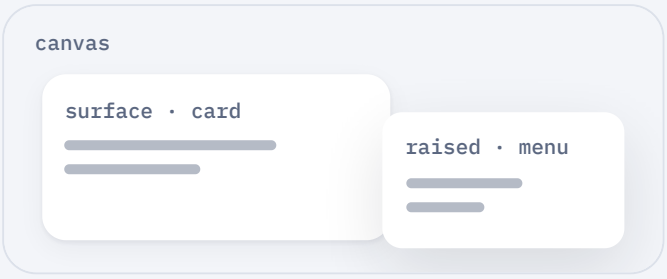

38 stocks rose and 21 fell, with ₦12.4B traded.

Surfaces and text

Dark is the default theme. Light applies when the user chooses it, or when their device prefers light and no choice is saved. Every value lives in `tokens.css` and was checked against WCAG 2.2: text at least 4.5:1, UI boundaries at least 3:1.

Dark: deep navy layers. Each step up is a lighter surface plus a soft shadow.

Light: a cool grey canvas with white surfaces lifted by shadow.

TOKEN AND USE	DARK	LIGHT
bg-canvas Page background	#070B14	#F3F5F9
bg-surface Cards, panels	#0F1626	#FFFFFF
bg-nav Sidebar, bottom nav	#0A101C	#FFFFFF
bg-raised Menus, popovers, dialogs	#141D31	#FFFFFF + shadow
bg-sunken Chart plot area, inset wells, bar tracks	#0A101C	#EEF2F7
bg-selected Selected row, active nav item, lead story	#10241F	#EBF8F3
border-subtle Dividers	#172033	#E8ECF2
border-default Outlines (cards use elevation instead)	#1F2A40	#DCE1EA
border-input Form-field boundaries	#61708F 3.5:1	#848C9C 3.4:1
text-primary Body, headings, numbers	Aa #EDF1F8 17.5:1	Aa #0E1526 18.6:1
text-secondary Supporting text, labels	Aa #B4BED0 9.6:1	Aa #3A4660 9.6:1
text-muted Captions, timestamps, axis labels. **The lowest allowed text colour**	Aa #8D98AE 6.2:1	Aa #5B6780 5.9:1

Ratios are the measured contrast for each text and input colour. The old muted grey #6B7280 measured 3.96:1, below the 4.5:1 text minimum, and is retired.

Brand, market and feedback

Colour carries meaning, so each of these has one job. Gain and loss always travel with a sign and an arrow, so the meaning survives for colour-blind readers and on a black-and-white printout.

TOKEN AND MEANING	DARK	LIGHT
brand Lens Green: primary action, active nav, focus ring, links	#00C896	#00805F
gain Price up, always with + and ▲	#2FD38F	#047A4E
loss Price down, always with – and ▼	#FF6B81	#C42343
unchanged No change, shown as 0.00% ■	#B4BED0	#3A4660
danger Errors, destructive actions	#FF6B81	#C42343
warning Stale data, quota near its limit	#F5B841	#8F5B00
info Neutral notices	#6CB2FF	#1D63C9
ai Anything AI-generated	#B49CFF	#6D4ED8

LIGHT

▲ +5.50 (+2.31%) ▼ −1.20 (−0.45%)

■ 0.00 (0.00%)

▲ +9.98% ▼ −4.12%

Equity Watchlist Bullish Bearish

Data delayed New ✦ AI

From top: inline price change; solid change pills for ranked lists such as top movers; badges built from the `-subtle` variants, which are 10–18% tints of each colour.

Brand vs gain. Lens Green and gain green are the same hue family on purpose: the brand is about growth. To avoid confusion, primary buttons never sit inside price data, and gain text always carries + and ▲.

Market

News

The active nav item's halo is the only glow in the product, and it appears in dark mode only.

Chart palette

Charts have their own tokens so price, indicators and signals stay readable together. Overlay lines differ by dash pattern as well as colour: SMA solid, EMA dashed, Bollinger bands dotted.

Dark theme, drawn from the chart tokens. The volume pane uses translucent up and down colours. News markers are a small neutral “N” in the bottom axis band, never on top of signal markers.

SERIES	DARK	LIGHT	LINE STYLE
Up / down candle `chart-up / chart-down`	#2FD38F #FF6B81	#0E9F6A #D9334F	Filled bodies
Line (close) `chart-line`	#00C896	#009E78	Solid
SMA 50 / SMA 200 `chart-sma-50 / -200`	#F5B841 #FF9F1C	#B07A00 #C2410C	Solid
EMA 12 / EMA 26 `chart-ema-12 / -26`	#B49CFF #6CB2FF	#6D4ED8 #1D63C9	Dashed
Bollinger bands `chart-bollinger`	#8A91A2	#848C9C	Dotted
Buy / sell markers `chart-signal-buy / -sell`	#2FD38F #FF6B81	#047A4E #C42343	▲ below the bar, ▼ above it

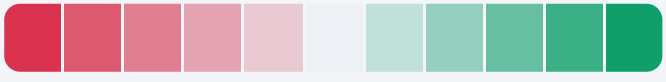

Sector heat (treemap)

DARK

−5% 0 +5%

LIGHT

−5% 0 +5%

A diverging scale from loss, through `chart-heat-neutral`, to gain. It is clamped at ±5%, so a sector down 8% shows the same colour as one down 5%.

Three typefaces, three jobs

IBM Plex Sans carries everything you read, IBM Plex Mono carries every number, and the Fraunces serif gives each page an editorial headline. All three are open source and self-hosted.

Aa

Fraunces 600

Page headlines and card titles only. Never body copy, labels, numbers or tickers.

Aa

IBM Plex Sans

Body, labels, buttons and captions. Weights 400, 500 and 600.

01

IBM Plex Mono

Numbers, tickers, prices and percentages, with tabular figures. Weights 400 and 500.

Type roles

Headline Fraunces · 48–60 px · 600 one per page	**The market rose for a third day**
Page and card titles Fraunces · 30–36 px page, 20 px card · 600	**Market today** **Top movers**
Price headline Plex Mono · 36/40 px · 500 tabular figures	₦245.00
Body Plex Sans · 16/24 px · 400	MTNN rose 2.3% today on ₦4.1B traded, its third gain in a row.
Secondary and table cells Plex Sans · 14/20 px · 400 numbers in cells use Mono	Supporting text and table cells. Price ₦478.50
Overline and label Plex Sans · 12/16 px · 500 uppercase, short labels only	NGX ALL-SHARE
Numbers Plex Mono · inherits size · 400–500 right-aligned in tables	104,215.38 · +0.84% · ZENITHBANK
Caption, timestamp, axis Plex Sans · 12/16 px · 400 muted text colour	Data as of 14:35 WAT · 26 Oct

Sizes are on-screen pixels; this page shows them at true size. The headline is shown at 40 px to fit the page.

Numbers and type rules

A market app is mostly numbers, so they get the most care: one format per kind of value, monospaced tabular figures so columns line up, and a true minus sign.

Number formats

KIND	FORMAT	EXAMPLE
Price	₦ and 2 decimal places, grouped	₦1,234.50
Change	sign and 2 decimals, with arrow	▲ +12.40 · ▼ −3.10
Percent	sign, 2 decimals and %	+2.31% · −0.45% · 0.00%
Large money	compact, 1 decimal	₦1.2B · ₦845.3M · ₦12.4K
Volume	compact, no currency	12.4M
Date and time	always labelled WAT	26 Oct 2026 · 14:35 WAT
Missing value	em dash	—

Why tabular figures

PROPORTIONAL	TABULAR (PLEX MONO)
₦1,111.11	₦1,111.11
₦8,808.88	₦8,808.88
₦404.40	₦404.40
₦17.10	₦17.10

Every digit takes the same width, so decimal points line up and a refreshing price does not jitter.

Minus sign and screen readers

−0.45	-0.45
TRUE MINUS, U+2212	HYPHEN: TOO SHORT

Display text uses the true minus sign. Screen-reader text spells values out, for example “down 3.10 naira, minus 0.45 percent”.

Putting it together

MTN Nigeria MTNN

● Data as of 14:35 WAT · 24 Oct

₦245.00 ▲ +5.50 (+2.31%)

Fraunces: card title · Plex Mono: ticker, price, change · Plex Sans: caption

Rules

- **12 px is the floor** for any text, including chart axes.
- **No letter-spacing** except on uppercase overlines.
- **Self-hosted fonts.** Fonts load from the app itself, because the security policy allows no third-party fonts. Only the needed weights ship: Sans 400, 500 and 600; Mono 400 and 500; Fraunces 600.
- **Preloaded hero fonts.** The first screen preloads Fraunces 600, Plex Sans 400, and the Plex Sans subset that holds the naira sign ₦. Without this the headline reflows when fonts arrive and the page shifts.

Spacing, layout and grid

Everything sits on a 4 px grid, and the app shell changes shape at two breakpoints. Mobile is designed first.

4 px spacing scale

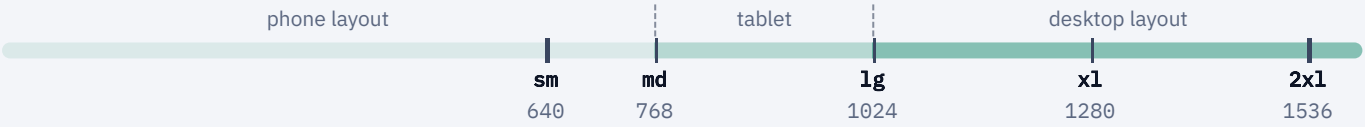

space-1	4 px
space-2	8 px
space-3	12 px
space-4	16 px
space-5	20 px
space-6	24 px
space-8	32 px
space-10	40 px
space-12	48 px
space-16	64 px
space-20	80 px

How spacing is used

- **Component padding** uses 8, 12 or 16 px.
- **Section gaps** use 24 or 32 px.
- **Density** is comfortable by default. Tables offer a “Compact” toggle that shrinks rows from 40 to 32 px, for mouse and trackpad users only.

MTNN	₦245.00	40 px
MTNN	₦245.00	32 px, compact

Breakpoints (Tailwind defaults, px)

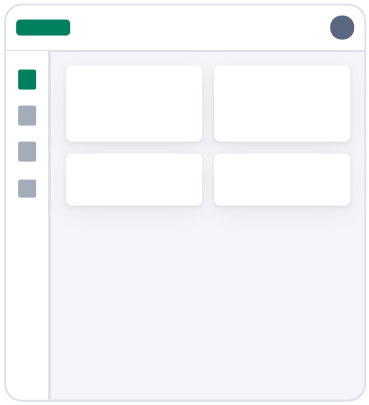

App shell at each size

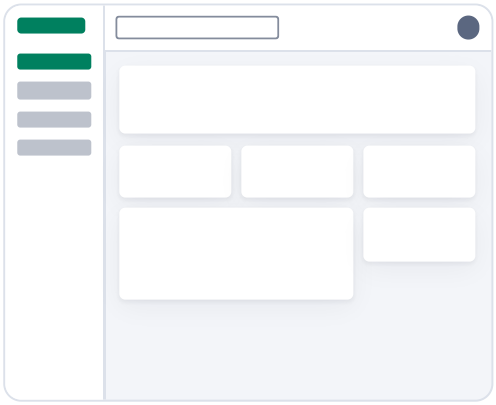

Under 768 px

Top bar with logo, search icon, freshness and avatar. Bottom nav: Market · News · Watchlist · Account. 16 px gutters, single column.

768 to 1023 px

Top bar plus a collapsible 72 px icon rail. 24 px gutters, two columns where useful.

1024 px and up

240 px sidebar and a 56 px top bar with persistent search. 32 px gutters, a 12-column grid, content up to 1440 px wide.

Shape, elevation and motion

Surfaces are separated by depth rather than outlines, corners get rounder as elements get bigger, and motion is quick and quiet.

Corner radius (px)

4
Badges, chips

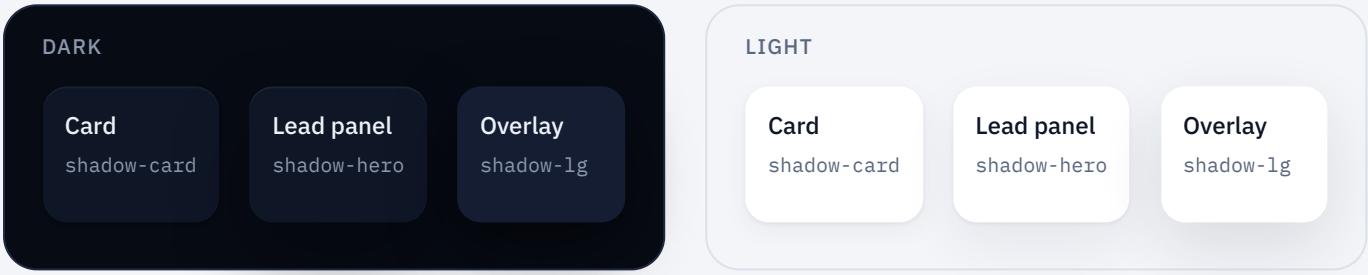

8
Buttons, inputs

16
Cards

20
Hero panels, dialogs

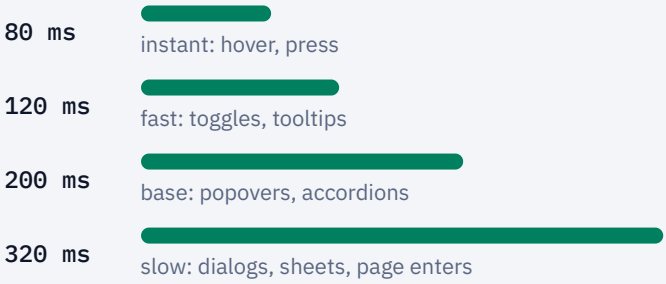

full
Pills, avatars

Elevation

Cards and tiles use `shadow-card`: a hairline top highlight plus a soft shadow in dark mode, a soft shadow in light. The page's lead panel, such as the market headline or stock header, uses `shadow-hero`. Menus and dialogs keep the stronger overlay shadows. Cards keep a transparent border so Windows high-contrast mode can still outline them.

Motion

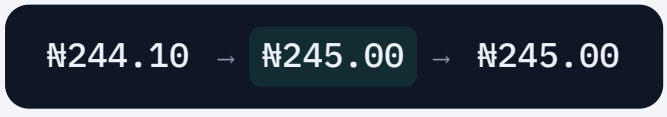

Standard
most transitions

Enter
things arriving

Exit
things leaving

A PRICE UPDATE, FRAME BY FRAME

before — 0–600 ms: gain tint — settled

LAYERING ORDER (Z-INDEX TOKENS), BOTTOM TO TOP

`tooltip 70`
`toast 60`
`modal 50`
`overlay 40`
`dropdown 20`
`sticky 10`
`base 0`

- **Animate opacity and transform only.** They are cheap to render and never shift the layout.
- **A changing number may flash a subtle tint** for 600 ms. It never blinks.
- **Reduced motion is honoured.** Every duration drops to 0 when the device asks for reduced motion.

Components, as they look

Real components rendered from the tokens, using the team's illustrative sample data (not real prices). The same markup switches theme by changing token values alone.

Data delayed

Component catalogue

There are 32 components. Each is built on a Radix primitive where one exists (Radix supplies accessible behaviour without styling), lives in `frontend/src/components/ui/`, and uses tokens only. States cover default, hover, focus, active, disabled, loading and error where they apply.

Actions and inputs

COMPONENT	VARIANTS AND SIZES	KEY BEHAVIOUR AND ACCESSIBILITY
Button	primary (brand fill), secondary (outline), ghost, danger · sm 32, md 40, lg 44 px	A real button element. Loading keeps its width and marks it busy. Icon-only buttons need an accessible label. Never disabled without an explanation nearby.
Input / PasswordInput	default, error · with label, hint and error text	The label is always visible; a placeholder is never the label. The error text is linked to the field. Password fields have a show/hide toggle.
SymbolSearch	inline in the top bar; command palette on / or ⌘K (Ctrl K)	A combobox matching ticker and company name. Arrow keys and Enter to choose. Shows recent searches.
SegmentedControl	text, icon	A single-choice toggle group, used for range (1M 3M 6M 1Y ALL), Candle/Line and Snapshot/Range.
DateRangePicker	presets and custom	Presets first, calendar in a popover. Dates are in WAT; the allowed range comes from the market-status API.

Containers and data

COMPONENT	VARIANTS AND SIZES	KEY BEHAVIOUR AND ACCESSIBILITY
Card	default, interactive (link), inset	An interactive card is a single link, never a link with buttons nested inside.
StatTile (KPI)	default, with delta, with sparkline	Overline label, value in Mono at 30 px, a PriceChange, and an optional sparkline. The sparkline is hidden from screen readers; its value is in the text.
PriceChange	inline, pill · sm, md	Arrow, sign, value and percent in the gain, loss or unchanged colour. Screen-reader text spells out the direction.
TickerChip	default, with change	The ticker in Mono, linking to the stock page.
DataTable	default, compact · sortable · sticky header	Real table semantics, with sort state announced on headers. Numbers right-aligned in Mono. Virtualised above 100 rows. On mobile it scrolls sideways inside its card with the first column pinned.
Tabs	line	Synced to the URL when they change the view.
Badge	neutral, brand, gain, loss, warning, info, ai	Always readable at 12 px. Never the only carrier of meaning.

Component catalogue, continued

Feedback and overlays

COMPONENT	VARIANTS AND SIZES	KEY BEHAVIOUR AND ACCESSIBILITY
Banner	info, warning (stale data), danger, AI disclaimer	Announced as a status, or as an alert for errors. Dismissible only when not critical.
Toast	success, error, info	Announced politely. Auto-dismisses after 5 s, pausing on hover or focus. Never used for errors that need action.
Dialog / Sheet	centred on desktop, bottom sheet on mobile	Traps focus, closes on Esc, and returns focus to where it came from.
Tooltip	default	Never holds essential information. Opens on keyboard focus as well as hover.

Loading, empty and error states

COMPONENT	VARIANTS AND SIZES	KEY BEHAVIOUR AND ACCESSIBILITY
Skeleton	text, block, chart	Matches the final layout so nothing shifts. The loading region is marked busy.
EmptyState	no data, no results, first run	An icon, one sentence and one action.
ErrorState	inline, full panel	The cause in plain language and a retry, plus a request ID for support.
FreshnessStamp	inline; banner when stale	“Data as of 14:35 WAT · 26 Oct”. Turns to the warning colour when data is more than 2 hours old during market hours.

AI and news

COMPONENT	VARIANTS AND SIZES	KEY BEHAVIOUR AND ACCESSIBILITY
AIInsightCard	loading, result, quota exceeded, error	Violet AI treatment with the ✦ icon and the title “AI signal interpretation”. Shows stance, summary, drivers, key levels, confidence and the headlines considered. The footer (model, generated time, data date, disclaimer) is always visible, never collapsed.
NewsItem	default, compact (chart tooltip), with ticker chips	Headline as an external link marked ↗, which tells screen readers it opens a new tab. Source domain, time in WAT, a two-line snippet, and a “Mentions MTNN” or “Sector · ICT” badge. Never the full article.
NewsList	stock panel, top stories, watchlist feed	“Mentions {SYMBOL}” above “Sector news”, an empty state, a “See all news” link, and a note that news is collected automatically and may be incomplete.
NewsMarker	single, count	A small neutral “N” in the chart's bottom axis band, never on top of signal markers. Focusable; its tooltip lists the day's headlines.
TopicChip	default, active	A neutral chip with a topic from the controlled topic list. Links to the filtered News page.

Component catalogue, continued

Filtering and admin

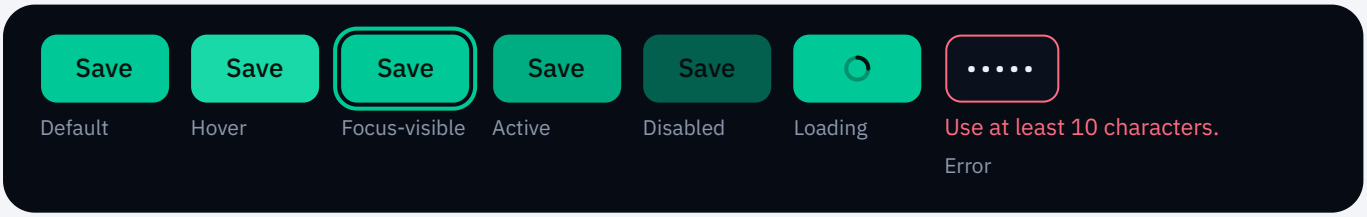

COMPONENT	VARIANTS AND SIZES	KEY BEHAVIOUR AND ACCESSIBILITY
FilterPanel	desktop rail, mobile bottom sheet	Checkbox and radio groups with counts, such as “Dividends (12)”. Zero-count options stay visible but disabled. The mobile sheet ends with “Apply (23 results)”.
FilterChips	active filters, quick filters	Removable chips (“Topic: Dividends ×”) with “Clear all”. On mobile a quick-filter row sits above lists.
AuditLogTable	desktop table, mobile card list	Time (WAT), actor, action, target, outcome badge and IP. A row opens a detail drawer. “Suspicious” uses the warning badge. Filters sync to the URL.

Charts and app frame

COMPONENT	VARIANTS AND SIZES	KEY BEHAVIOUR AND ACCESSIBILITY
PriceChart	candle, line · Volume, RSI and MACD panes	Lightweight Charts, themed from tokens. Keyboard: ← and → move the crosshair, + and − zoom. “View as table” shows the same data. A spoken summary such as “MTNN, 6 months, up 12.4%, last ₦245.00”.
SectorTreemap / MoversScatter	one style each	ECharts with the shared diverging colour scale, a text legend and a table alternative.
AppShell	sidebar, rail, bottom nav	A skip-to-content link, page landmarks, and the current page marked for screen readers.
Avatar / UserMenu	initials	A dropdown with Account, Theme and Sign out.

Component states

Every interactive component defines the same set of states, so behaviour is predictable everywhere. Shown here on the primary button and a text input, in the dark theme.

A disabled control always has an explanation nearby. Loading keeps the button's width so the layout does not jump.

Icons

Lucide icons, 20 px by default with a 1.75 px stroke. They are hidden from screen readers unless they stand alone. No emoji in the interface chrome.

Interaction patterns

Components are only half the system. These rules decide how screens behave when data loads, goes stale, is filtered, shared or fails.

URL is state

Symbol, range, strategy, overlays, panels and market mode live in the web address, so back, forward and sharing a link all work.

Loading

Skeletons on first load. While refetching, keep the old data visible with a subtle progress bar. Never blank a chart that has data.

Freshness

Every data screen shows a FreshnessStamp. After 14:30 WAT it reads “Closing data”. On weekends and holidays: “Last trading day: Fri 24 Oct”.

Empty first run

The stock page with no symbol shows a search and “Popular: MTNN · DANGCEM · ZENITHBANK · GTCO”. Nothing is shown disabled.

Progressive disclosure

Defaults are a candle chart, 6 months and the volume pane. RSI, MACD and overlays are one tap away under “Indicators”.

Signals on the chart

The chosen strategy's markers appear on the price chart. Each marker is linked to its row in the list below, and focus moves between them.

AI on demand

An “Explain these signals” button shows the quota left, such as “3 of 5 today”. Cached results appear instantly with “Generated 09:12 WAT”.

News and external links

News always shows its source and date. External links open in a new tab, carry ↗ and say so to screen readers. Relevance is never overstated: “About MTNN”, “Mentions MTNN”, or “Sector news”.

Filtering lists

Facet counts reflect the current results, and every filter lives in the URL. An empty result names the most restrictive filter, with a one-tap remove.

Forms

Validate when a field loses focus, then as the user types. Submit stays enabled. On error, focus the first invalid field and show a summary.

Destructive actions

A confirm dialog names the object, as in “Delete your account?”, with the danger button on the right.

Keyboard

/ or ⌘K to search, g then m for market, g then w for watchlist, ? for the shortcut sheet. All discoverable, all optional.

Errors

Explain in plain English what happened and what to do. Never show raw exceptions.

Accessibility, content and voice

The baseline is WCAG 2.2 level AA, and it is tested rather than assumed. The copy follows the same idea as the visuals: plain, calm and specific.

Accessibility baseline

Contrast and focus

Contrast is built into the tokens. Every interactive element shows a 2 px Lens Green focus ring with a 2 px gap.

Target size

At least 24 px everywhere, and at least 44 px on touch screens.

Charts

Every chart has a text summary and a data-table alternative. Colour is never the only signal.

Announcements

Price refreshes are not announced, as that would be too noisy. Errors and "AI ready" are announced politely.

Motion

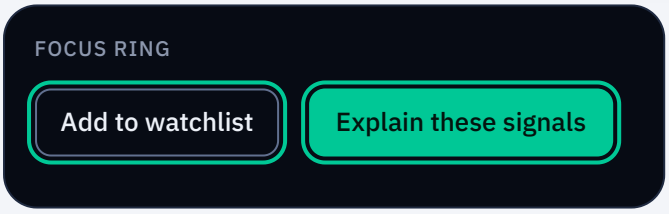

Reduced motion is honoured. No animation plays on data by itself.

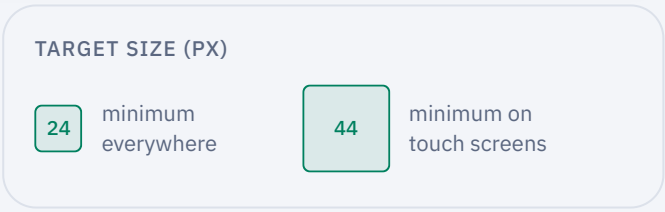

Language

Pages are marked as Nigerian English, and ₦ is read aloud as "naira".

Testing

Automated axe checks in CI must find zero serious or critical issues. Before launch, the key journeys (accepting an invite, the daily check-in, researching a stock, asking for an AI read) are tested by hand with NVDA on Chrome and VoiceOver on Safari.

Content and voice

DO

"MTNN rose 2.3% today on ₦4.1B traded."

DON'T

"MTNN is skyrocketing! 🚀"

DO

"MACD crossed above its signal line on 21 Oct, a pattern traders read as bullish momentum."

DON'T

"Buy now." Never give imperative investment advice.

Explain indicators in one line on hover or tap, for example: *"RSI above 70 often means the stock has risen fast and may cool off."*

STANDARD DISCLAIMER · PENDING LEGAL REVIEW

EquityLensNG provides market data and educational analysis, not investment advice. Signals and AI interpretations can be wrong. Do your own research or consult a licensed adviser.

  --font-mono:     var(--font-mono);
  --radius-card:   var(--radius-lg);
  /* …abridged */
}
```

Chart adapters read tokens at runtime with `getComputedStyle`, for example the value of `--chart-up`, and re-apply them when the theme changes.

Governance

1. Tokens change only through a pull request.
2. That PR updates `tokens.css`, the design-system doc and `preview.html` together.
3. It bumps the version in the `tokens.css` header.
4. It adds a `CHANGELOG.md` entry.

A lint rule blocks hard-coded hex colours anywhere in `frontend/src`.

Where things live

`design/tokens.css`	All token values
`design/preview.html`	Live visual reference, both themes
`docs/06-design-system.md`	The spec this guide explains
`docs/07-brand-guidelines.md`	Logo and brand rules
`frontend/src/components/ui/`	Component code

Glossary

Design token
A named design value, such as `--color-brand`, used instead of a raw value.

Contrast ratio
How different text and background are in lightness, from 1:1 (none) to 21:1.

Tabular figures
Digits that all take the same width, so columns of numbers line up.

SMA, EMA
Simple and exponential moving averages of price over a number of days.

Bollinger bands
Lines two standard deviations above and below a 20-day average price.

WCAG 2.2 AA
The web accessibility standard the app meets. It sets minimum contrast, target sizes and more.

Radix
A library of unstyled, accessible React building blocks such as dialogs, menus and tabs.

WAT
West Africa Time (UTC+1), the time zone of the Nigerian Exchange.

RSI, MACD
Momentum indicators: Relative Strength Index, and Moving Average Convergence Divergence.

Standfirst
The one-sentence summary under a headline, as in a newspaper.
